SUMMARY

Third-year Computer Engineering student at Cairo University with hands-on experience building full-stack and mobile applications, from a React Native app with real-time WebRTC video and multiplayer sync, to a Node.js/PostgreSQL cinema booking system with real-time updates via Socket.io, to a Python- and SQL-backed event booking platform. Led a team building the latter end-to-end, including its administrative dashboard, and contributed to mobile feature development during a software engineering internship.

SKILLS

Languages: JavaScript, TypeScript, Python, C++, SQL, C

Frameworks & Tools: React, React Native, Expo, Node.js, Express, Socket.io, Git

Backend & Data: SQL (PostgreSQL), WebRTC

Foundations: Object-Oriented Programming, Data Structures & Algorithms

Soft Skills: Team Leadership, Problem Solving, Time Management & Prioritization

WORK EXPERIENCE

Mobile Developer Intern — Park St. Developments

June 2026 - Present

Al Sheikh Zayed City, Giza

- Architected and developed FaceGame, a real-time multi-user interactive app utilizing custom networking logic (see Projects).
- Developed a cinema booking application using Node.js, Express, and PostgreSQL, with Socket.io for real-time booking updates.
- Completed a 2-week cross-functional rotation in IT infrastructure, covering CCNA fundamentals including NAT configuration and router/switch data flow.

PROJECTS

FaceGame

2026

Using React Native, Expo, Node.js, C++, WebRTC

- Architected and developed a real-time, multi-user mobile gaming application with interactive video capabilities.
- Implemented low-latency peer-to-peer audio/video streaming using WebRTC, with real-time event synchronization and state management for seamless multiplayer interaction.
- Built backend APIs and client-side logic using Node.js, with C++ integration for performance-critical modules.

E7gezly Event

Oct - Dec 2025

Using React, Python, JavaScript, SQL

- Led a team building E7gezly, an event booking platform where organizers create and manage listings and users browse, search, and filter events.
- Built the administrative dashboard and backend logic in Python, including SQL triggers, to manage users, events, wishlists, and ticket purchases.

Snake Monopoly Game

2024

Using C++

- Designed and built a hybrid board game combining Snake & Ladders and Monopoly mechanics, with custom power-abilities for players, using C++ classes and inheritance for the OOP-based game logic.

EDUCATION

Faculty of Engineering, Cairo University

2023 - 2028 (Expected)

B.Sc. in Computer Engineering

CERTIFICATIONS

CS50x & CS50P: Computer Science & Python Programming, Harvard University

LANGUAGES

Arabic | English
